1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-46 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat. No. 4139514 Bassett.

Bassett discloses a clear coat containing dioctyl sodium sulfosuccinate as an emulsifier and the other ingredients of the instant claims. See column 6, lines 23-24; column 7, lines 1-54; and column 10, lines 18-44. Such a compound will necessarily reduce the ability of rain to bead on a surface, i.e. increase the ability of water to wet the surface, just as it increases the ability of water to wet the particles of the dispersion. 0.07 of the surfactant of the patentee falls within the scope of the instantly claimed accuracy of 0.1 since to a single decimal point 0.07 rounds up to 0.1. Furthermore, the applicant has ignored the other parts of the reference cited by the examiner and has not shown that they do not contain the instantly claimed amounts of dioctyl sodium sulfosuccinate. By definition, a surfactant reduces the surface tension between one medium and another. In these cases the binder and the water of the emulsion. Rain, being water, will therefore have its surface tension reduced likewise by the dioctyl sodium sulfosuccinate remaining in the film and it will thereby be wetted with water just as the emulsified particles of the polymer are wetted with water. The applicant's contention regarding the claimed requirement of reducing the ability of rain to bead on a film of clearcoat is therefore inherent in the patentee's film since the ability to wet the film is the same as the claimed requirement of reducing the ability of rain to bead on a film. Thus, the applicant's method claims are necessarily met by the patentee's coating method. For the above reasons, this rejection is maintained.

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
